Joint Research Centre

Coding Primary Site and Tumour Morphology

JRC/ENCN, IARC, Slovenian Cancer Registry

Ljubljana, 21 November 2019

Nadya Dimitrova

Outline

- What is coding and why do we need it?
- ICD-10 and ICD-O
- ICD-O-3 Topography coding rules
- ICD-O-3 Morphology coding rules
- How to code?
- ICD-O-3 online

What is coding and why do we need it?

Coding:

- to assign numerical codes to text descriptions

Example: Malignant neoplasm of the lung = C34

Advantages:

- group cases with similar concepts – site of origin, type of cancer
- complex series of pieces of information can be:
 - conveyed,
 - stored and
 - retrieved in the form of numbers (quickly, easier)

Cancer registry data - example

ИСКАНЕ
ЗА ПАТОЛОГОСТОЛОГИЧНО ИЗСЛЕДВАНЕ

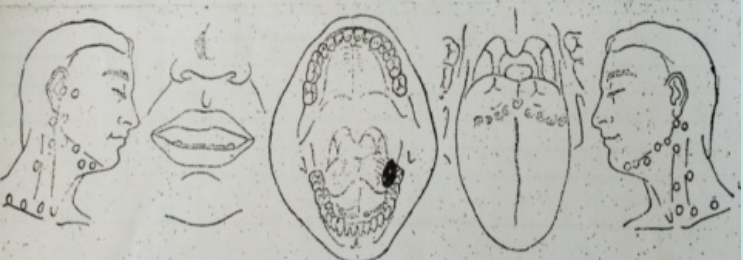

на болничен № 590915

История на болестта (амбулаторен) № 01

Материалът е взет чрез изрязване, кюртаж

Анамнеза за специален статус:

При операция - вид на пат. процес и точна локализация

Съществени лабораторни данни:

Приложено лечение:

Травено ли е преди това биопсично изследване, къде, кога, резултат:

Ерогична клинична диагноза:

Ифренич. диагноза:

Дата на изпращане материала:

Лекуващ лекар:

| PIN | Incidence date | Site | Morphology and behavior | grade |
|------------|----------------|------|-------------------------|-------|
| 1011000047 | 04082000 | C419 | 91803 | 1 |
| 1011000713 | 22062000 | C504 | 85003 | 2 |
| 1011010324 | 26072001 | C186 | 84803 | 2 |
| 1011010983 | 04052001 | C56 | 84503 | 4 |
| 1011020767 | 30092009 | C229 | 80003 | 2 |
| 1011030136 | 01032007 | C80 | 80003 | 9 |
| 1011030898 | 27102005 | C64 | 83103 | 4 |
| 1011040255 | 04012004 | C629 | 91003 | 1 |

What is coding and why do we need it?

Coding is based on **classification**:

- arrangement of neoplasms or distribution in classes according to a method or system, ensuring **comparability**.

The two most important items of information are:

- **Topography**: the location (site) of the tumor in the body;
- **Morphology** (histology, cytology): the appearance of the tumor when examined under the microscope.

What is ICD-O?

- Subset of *International Classification of Diseases*
- Specific code set for **neoplasms**
- Coding system for **primary site** and **cell type**
 - *Example*: adenocarcinoma of lung = C34, 8140/3
- **ICD-O-3.2** version published in April 2019, to be used from 2020 - <http://www.iacr.com.fr>

Original - **all diseases** Subset - **neoplasms only**

Differences: **Organization**

- ICD-10 organized by
 1. Behavior
 2. Anatomic site involved
 3. Morphology codes optional

- ICD-O organized by
 1. Anatomical site involved
 2. Morphology + Behavior

ICD-10 and ICD-O-3

| Term | ICD-10 | ICD-O-3 |
|--|--------|--------------|
| Lung tumor, benign | D14.3 | C34.9 8000/0 |
| Lung tumor, borderline | D38.1 | C34.9 8000/1 |
| Lung tumor, in situ | D02.2 | C34.9 8000/2 |
| Lung tumor, invasive | C34.9 | C34.9 8000/3 |
| Lung tumor, metastatic | C78.0 | C34.9 8000/6 |
| Lung tumor, uncertain if primary or metastatic | D38.1 | C34.9 8000/9 |

Differences: Codes

- Some **special codes** added in ICD-O
- Some ICD-10 codes **not used**
- Some codes used **differently**

ICD-O Special Site Codes

C42 Hematopoietic and reticuloendothelial system

- C42.0 Blood
 - C42.1 Bone marrow
 - C42.2 Spleen
 - C42.3 Reticuloendothelial system, NOS
 - C42.4 Hematopoietic system, NOS
-
- Use as primary site for **leukemia (C42.1), multiple myeloma (C42.1), Waldenstrom macroglobulinemia (C42.0)**

ICD-10 Codes Not Used in ICD-O

Histology-specific ICD-10 Codes

| ICD-10 | | ICD-O |
|---------|---|------------------|
| C43 | Melanoma of skin | C44 |
| C45 | Mesothelioma | C38.4* |
| C46 | Kaposi's sarcoma | C44* |
| C81-C96 | Lymphomas, leukemias, other blood diseases | C42.1*, C77.* |
| | | * For most cases |

Other ICD-10 Codes Not Used in ICD-O

| ICD-10 | | ICD-O |
|---------|--|--|
| C26.1 | Spleen | C42.2 |
| C78-C79 | Secondary malignant neoplasm of other specified sites | Code primary site (only) in ICD-O |
| C97 | Malignant neoplasm of independent multiple primary sites | Code each primary separately |

Site Codes Used Differently

| ICD-10 | ICD-O |
|---|---|
| C77 Lymph nodes (primary and secondary) | Use C77._ as primary site for nodal lymphomas . Do not code lymph node metastases as primary sites in ICD-O. |

Structure of Code

Digits

Topography – 4

Cell type – 4

Behavior – 1

Grade – 1

Meaning

C 3 4 . 2
Primary
Subsite

8 0 7 0 / 3 2
Cell type
Behavior
Differentiation

C 3 4 . 2
Lung
Middle lobe

8 0 7 0 / 3 2
Squamous cell
carcinoma
Invasive
Moderately differentiated

ICD-O-3 Topography Coding Rules

Coding **topography** using ICD-O-3

- The **topography code**:
 - Indicates the **site of origin** of a neoplasm – where the tumor arose.
 - Has four-characters that run from **C00.0** to **C80.9**
 - A decimal point (.) separates subdivisions of the three-character categories

C _ _ . _
└───┘ └─┘
site subsite

C 50 . 2
└───┘ └─┘
breast, upper inner quadrant

ICD-O topography codes - example

C50 BREAST (excludes skin of breast C44.5)

- C50.0 Nipple
Areola
- C50.1 Central portion of breast
- C50.2 Upper-inner quadrant of breast
- C50.3 Lower-inner quadrant of breast
- C50.4 Upper-outer quadrant of breast
- C50.5 Lower-outer quadrant of breast
- C50.6 Axillary tail of breast
Tail of breast, NOS
- C50.8 Overlapping lesion of breast
(see section 4.2.6)
Inner breast
Lower breast
Midline of breast
Outer breast
Upper breast
- C50.9 Breast, NOS
Mammary gland

ICD-O topography codes - example

C18 COLON

- C18.0 Cecum**
Ileocecal valve
Ileocecal junction
- C18.1 Appendix**
- C18.2 Ascending colon**
Right colon
- C18.3 Hepatic flexure of colon**
- C18.4 Transverse colon**
- C18.5 Splenic flexure of colon**
- C18.6 Descending colon**
Left colon
- C18.7 Sigmoid colon**
Sigmoid, NOS
Sigmoid flexure of colon
Pelvic colon
- C18.8 Overlapping lesion of colon**
(see section 4.2.6)
- C18.9 Colon, NOS**
Large intestine (excludes rectum, NOS
C20.9 and reirectosigmoid junction C19.9)
Large bowel, NOS

Special topography codes

Divisions of the Esophagus – two incompatible systems and both are included.

- C15 Esophagus
 - C15.0 Cervical esophagus
 - C15.1 Thoracic esophagus
 - C15.2 Abdominal esophagus
 - C15.3 Upper third of esophagus
 - C15.4 Middle third of esophagus
 - C15.5 Lower third of esophagus
 - C15.8 **Overlapping** lesion of esophagus
 - C15.9 Esophagus, **NOS**
- radiographic and intraoperative descriptors
- endoscopic and clinical descriptors

ICD-O-3 Topography Coding Rules

- Rule A. Topographic regions and ill-defined sites
- Rule B. Prefixes
- Rule C. Tumors involving more than one topographic category or subcategory
- Rule D. Topography codes for lymphomas
- Rule E. Topography code for leukaemias

Rule A

Topographic regions and ill-defined sites

Rule A

Topographic Regions and Ill-defined Sites

How to use the topography codes for ill-defined sites?

“If the diagnosis **does not specify** the **tissue of origin**, code the **appropriate tissues** suggested in the **alphabetic index** for each **ill-defined site** in preference to the “**NOS**” category.”

Ill-defined site: term for area of the body used in a **general sense** - arm, ankle, face

NOS: Not otherwise specified

- Not elsewhere classified
- Term used in a general sense
 - When there are more specific codes
 - To encompass an organ as a whole

Rule A

Topographic Regions and ICD-defined Sites

- *Example:* Osteosarcoma of **ankle**
- *Issue:* Primary site not fully identified in diagnosis
- *Several non-specific codes available in the **alphabetic index***
 - C76.5 **Ankle, NOS**
 - C40.3 **Bone of ankle**
 - C44.7 **Melanoma of ankle**
 - C49.2 **Soft tissue of ankle**
- Use information from the cell type to code primary site.
 - **Osteosarcoma of ankle**
 - Code: C40.3 **bone** of ankle

Rule A

Topographic Regions and III-defined Sites

Implied rule:

- Code **as specifically as you can** with the information you have
- Avoid using ill-defined site/NOS codes if possible.

Rule B

Prefixes

Rule B. Prefixes

- "If a topographic site is modified by a prefix such as **peri-**, **para-**, or the like which is **not specifically listed** in ICD-O, code to the appropriate ill-defined subcategory **C76**, unless the type of tumour indicates origin from a particular **tissue**".
- Prefix terms in ICD-O index:

| Term | ICD-O code |
|------------------------------|------------|
| Periampullary | C24.1 |
| Periadrenal or perirenal | C48.0 |
| Retrocecal or peripancreatic | C48.0 |
| Supratentorial brain | C71.0 |

Rule B. Prefixes

- When term is not listed, determine **the location** it describes and code that.

- *Examples*

Paraspinal—along the spine:

C76.7 III-defined site of back

Perigastric—near the stomach:

C76.2 III-defined site of abdomen

Peribiliary—near the biliary tract:

C76.2 III-defined site of abdomen

Rule B. Prefixes

- **Implied rule:** When you can't find a code for the anatomic site term in the alphabetic index, use "ill-defined site of ..." **C76._**
- Do not code to primary site mentioned (such as spine, stomach, bile duct) when tumor is described as "near" that organ.

Rule C

**Tumours involving more than one
topographic category or subcategory**

Rule C. Tumors Involving More Than One Topographic Category or Subcategory

- “Use **subcategory “.8”** when a tumor overlaps the boundaries of two or more categories or subcategories and its point of origin cannot be determined.”
- **Implied rule:** If you can't tell where a single tumor started in an **organ** or **system**, use an “overlapping site code, C_ _ . 8.

Rule C. Overlapping Sites - examples

| Overlapping lesion of | ICD-O code |
|------------------------------|------------|
| Tongue | C02.8 |
| Major salivary glands | C08.8 |
| Lip, oral cavity and pharynx | C14.8 |
| Rectum, anus and anal canal | C21.8 |
| Biliary tract | C24.8 |
| Digestive system | C26.8 |
| Female genital organs | C57.8 |
| Male genital organs | C63.8 |

Rule C. Overlapping Sites - examples

Tumor of breast at 12:00 – C50.8

Large neoplasm of descending and sigmoid colon – C18.8

Glioma involving parietal and occipital lobes – C71.8

Rule C. Overlapping Sites

Does not apply to non-adjacent sites

- *Example:* Squamous cell carcinoma of skin of forehead and skin of forearm
 - Primary site: C44.9 Skin, NOS

Forearm and forehead are not adjacent sites.

Does not apply to separate lesions

- *Example:* Separate tumors in UIQ and LOQ of breast
 - Primary site: C50.9 Breast, NOS (or according to the rules for multiple primaries)

Rule D

Topography codes for lymphomas

Rule D. Topography Codes for Lymphomas

| Lymphomas arising in lymph nodes | Extranodal lymphomas |
|---|--|
| Code C77._ | Code to the site of origin , which may not be the site of the biopsy. |
| If multiple lymph node regions are involved, code to C77.8 (lymph nodes of multiple regions). | If no site is indicated for a lymphoma and it is suspected to be extranodal, code to C80.9 (unknown primary site). |
| If no site is indicated for a [nodal] lymphoma, code to C77.9 (lymph node, NOS). | |

Rule D. Topography Codes for Lymphomas

Implied rule: Code a lymphoma to its site of origin.

Examples:

- Hodgkin lymphoma of cervical lymph nodes → C77.0
- MALT lymphoma of stomach → C16.9
- B-cell lymphoma of inguinal and femoral nodes → C77.4
- Primary lymphoma of femur → C40.2

Rule D. Topography Codes for Lymphomas

C77.8 Special Rule: Involved lymph node chains do not have to be adjacent.

Examples:

Cervical and mediastinal nodes → **C77.8**

Axillary and periaortic nodes → **C77.8**

Rule E

Topography code for leukaemias

Rule E. Topography Code for Leukemias

“Code all **leukaemias** except myeloid sarcoma (M-9903/3) to **C42.1, bone marrow.**”

- Myeloid sarcoma: a deposit of malignant myeloid cells in soft tissue. Code to location of lesion.
- The following are also coded to **bone marrow, C42.1**
 - Multiple myeloma
 - Refractory anemias
 - Polycythemia vera
 - Myelodysplastic syndrome
 - Other hematopoietic diseases

ICD-O-3 Morphology Coding Rules

ICD-O-3 Morphology Coding Rules

- Rule F. Behavior code in morphology
- Rule G. Grading or differentiation code
- Rule H. Site-associated morphology terms
- Rule J. Compound morphology diagnoses
- Rule K. Coding multiple morphology terms

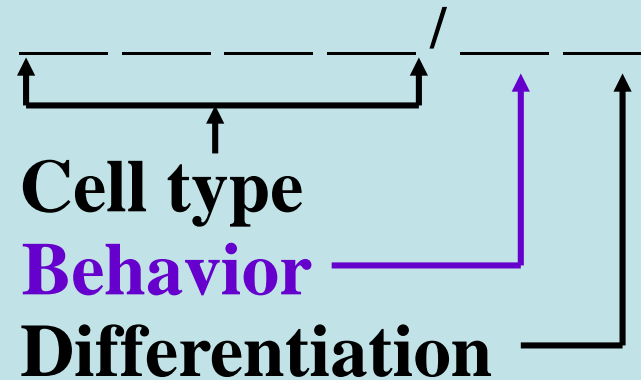

Note: **ICD-O-3.2** includes about 100 new terms, some of them with new codes

Rule F

Behavior code in morphology

Rule F. Behavior Code in Morphology

- “Use the appropriate **5th digit** behavior code even if the exact term is not listed in ICD-O.”

Behavior of a tumor is the way it acts within the body

Rule F. Behavior Code in Morphology

- Codes:
 - /0 – **benign** – the tumor grows in place without the potential for spread;
 - /1 – **uncertain** whether benign or malignant
 - /2 – **noninvasive or in situ** – the tumor is malignant, but still growing in place
 - /3 – **malignant, primary site** – the tumor invades surrounding tissues
 - /6* – **malignant, metastatic site** – the tumor disseminates from its point of origin and begin to grow at another site
 - /9* – **malignant, uncertain** whether primary or metastatic site
 - * **Not used by cancer registries, but by pathologists**

Rule F. Behavior Code in Morphology

- **The Matrix principle**

8010/0 Epithelial tumor, benign

8010/1* Borderline epithelial tumor

8010/2 Intraepithelial carcinoma, NOS

8010/3 Epithelial tumor, malignant (Carcinoma, NOS)

8010/6 Metastatic carcinoma

8010/9 Carcinomatosis

* 8010/1 is not printed in ICD-O-3, but **can be constructed** if the pathologist diagnoses a borderline epithelial tumor.

Rule F. Behavior Code in Morphology

Implied rule: It is OK to change the behavior code to accurately report what the pathologist said.

Example:

- Pathology report states "adenoid squamous cell carcinoma *in situ*"

ICD-O-3 only lists **8075/3 Adenoid squamous cell carcinoma.**

Change behavior code to **8075/2** to indicate in situ.

Rule F. Behavior Code in Morphology

- **ICD-O-3.2**

- About 65 changes (or new) of behavior code
- May impact on the definition of a reportable case

Examples:

| | | | |
|---|------|---|--|
| Change of behavior code (from 1) | 8150 | 3 | Pancreatic endocrine tumour, NOS (C25.4) |
| Change of behavior code (from 1) | 8580 | 3 | Thymoma, NOS (C37.9) |
| Change of code and behavior (was 8508/3) | 8500 | 2 | Cystic hypersecretory carcinoma (C50._) |
| Change of behavior code (from 3) | 8832 | 1 | Dermatofibrosarcoma, NOS (C44._) |

Rule F. Behavior Code in Morphology

Note: Most cancer registries collect only

/2 Carcinoma in situ; noninvasive; noninfiltrating; intraepithelial

/3 Malignant, primary site (invasive)

- If diagnosis comes from a **metastatic site**, **the cancer registry records primary site and morphology with behavior /3.**

Example: Pathology report says: "metastatic adenocarcinoma in lung biopsy." Coded as C34.9 8140/6 on report.

Cancer registry reports case as unknown primary site, C80.9 8140/3

Rule G

Grading or differentiation code

Rule G. Grading or Differentiation Code

- "Assign the **highest grade** or differentiation code described in the diagnostic statement."

Rule G. Grading or Differentiation Code

Histologic grading and differentiation for malignant tumors – describes how much or how little a tumor resembles the normal tissue from which it arose (**codes 1 to 4 and 9**).

Codes:

- 1** – Grade I, well differentiated
- 2** – Grade II, moderately differentiated
- 3** – Grade III, poorly differentiated
- 4** – Grade IV, undifferentiated, anaplastic
- 9** – grade, differentiation or cell type not determined, not stated or not applicable

Rule G. Grading or Differentiation Code

- **Cell origin/lineage** for leukemias and lymphomas (**codes 5 to 8 and 9**)

Codes:

5 – T-cell

6 – B-cell

7 – Null cell, Non T-non B

8 – NK cell

9 – grade, differentiation or cell type not determined, not stated or not applicable

Rule G. Grading or Differentiation Code

Implied rule: Code to the **higher grade**.

Example: moderately to poorly differentiated adenocarcinoma of prostate

- Moderately differentiated = grade 2
- Poorly differentiated = grade 3
- Code diagnosis as 8140/33

Rule G. Grading or Differentiation Code

- **Implied rule:** “**double code**” any statement of grade in the diagnostic term.

Example: undifferentiated carcinoma

- Undifferentiated carcinoma = 8020/3
- Undifferentiated = 4
- Code diagnosis as 8020/34

Rule G. Grading or Differentiation Code

Central Nervous System tumours follow a different system (table 27 in ICD-O)

WHO Grade I (benign or borderline malignant)

WHO Grade II ('low grade')

WHO Grade III ('anaplastic')

WHO Grade IV

Examples:

oligodendroglioma, NOS → 9450/32

anaplastic astrocytoma → 9401/33

glioblastoma → 9440/34

Rule G. Grading or Differentiation Code

Implied rule: For **haematological malignancies** use **cell origin**, not the differentiation (grade), if both are stated.

Example:

- Poorly differentiated B-cell nodular lymphocytic lymphoma
Poorly differentiated = grade 3
B-cell origin = code 6
Code diagnosis as **9693/36**

Rule H

Site-associated Morphology Terms

Rule H. Site-associated Morphology Terms

“Use the topography code provided when a topographic site is not stated in the diagnosis.

This topography code should be disregarded if the tumor is known to arise at another site.”

Suggested site code

- In parenthesis () after morphology term
- Most common site associated with neoplasm

Examples:

M-8330/3 Adenocarcinoma, follicular (C73.9 {thyroid})

M-9700/3 Mycosis fungoides (C44._ {skin})

Rule H. Site-associated Morphology Terms

Examples of terms that include a root word mentioning a site

- Nephroblastoma, NOS (C64.9 – kidney)
- Thymoma, NOS (C37.9 – thymus)
- Bronchiolar carcinoma (C34._ – bronchioles of lung)
- Hepatocellular carcinoma (C22.0 – liver)

No suggested site code is listed when malignancy could appear in many sites, such as adenocarcinoma, NOS

Rule H. Site-associated Morphology Terms

If a site is given that is different from the site indicated by the suggested site code, **use the site code appropriate to the diagnosis.**

Example: infiltrating duct carcinoma, head of pancreas

- 8500/3 Infiltrating duct carcinoma (C50._) *Suggested site code is breast—ignore this based on diagnosis!*
- Head of pancreas = C25.0
- Code diagnosis as C25.0 8500/3

Implied rule: Use the suggested site code as a guide to code the primary site. If the site stated in the pathology report is different, **code what the pathology report states (note: metastatic site).**

Rule J

Compound Morphology Diagnoses

Rule J. Compound Morphology Diagnoses

“Change the order of word roots in a **compound term** if the term is not listed in ICD-O-3.”

HETEROGENEITY WITHIN 1 TUMOUR

Rule J. Compound Morphology Diagnoses

Compound terms have **multiple root words**

Example:

- Myxofibrosarcoma – not in ICD-O-3.1 (added to ICD-O-3.2)

Break into word roots

Myxo / fibro / sarcoma

Change around word roots, then look up new term

Fibromyxosarcoma 8811/3

- Chondro-osteosarcoma →

Osteochondrosarcoma 9180/3

Rule K

Coding Multiple Morphology Terms

Rule K. Coding Multiple Morphology Terms

“When no single code includes all diagnostic terms, use the **numerically higher** code number if the diagnosis of a single tumor includes two modifying adjectives with different code numbers.”

Implied rule: Code to higher code number if there is no combination code.

For haematological malignancies - code **the most specific code** (not necessarily the highest code), take into account specific diagnostics, such as immunohistochemistry and cytogenetics.

Rule K. Coding Multiple Morphology Terms

Examples:

- **“Adenoid cystic spindle cell carcinoma”**

No combination code

Spindle cell carcinoma 8032/3

Adenoid cystic carcinoma 8200/3

Code morphology to higher number 8200/3

- **“Papillary and tubular adenocarcinoma”**

Papillary adenocarcinoma 8260/3

Tubular adenocarcinoma 8211/3

There is a single code: 8255/3 (Adenocarcinoma with mixed subtypes)

Rule K. Coding Multiple Morphology Terms

Look for a **code that represents the combined morphology:**

Mixed embryonal carcinoma and teratoma = teratocarcinoma 9081/3

Ductal carcinoma and lobular carcinoma 8522/3

- Compound terms

Carcinosarcoma 8980/3

Adenocarcinoma and squamous carcinoma = adenosquamous carcinoma 8560/3

Small cell-large cell carcinoma 8045/3

How to Code

- Break phrase into topography and morphology
- Look up morphology first
- Use up all the words in the phrase
- Add 5th and 6th digit codes
- Look up topography

Coding example 1

Diagnosis: Poorly differentiated hepato-cellular carcinoma of right lobe of liver

- What is it (morphology and behavior)?

Hepatocellular carcinoma, NOS (C22.0): 8170/3

- Suggested site code is included in index

Liver, right lobe: C22.0 Liver, NOS

- What else do we know?

Poorly differentiated: /_3

- Complete codes: C22.0 8170/33

Coding example 2

Diagnosis: Moderately differentiated adenocarcinoma of prostate

- What is it (morphology and behaviour)?

Adenocarcinoma [not otherwise specified]: 8140/3

- What else do we know?

Moderately differentiated: /_2

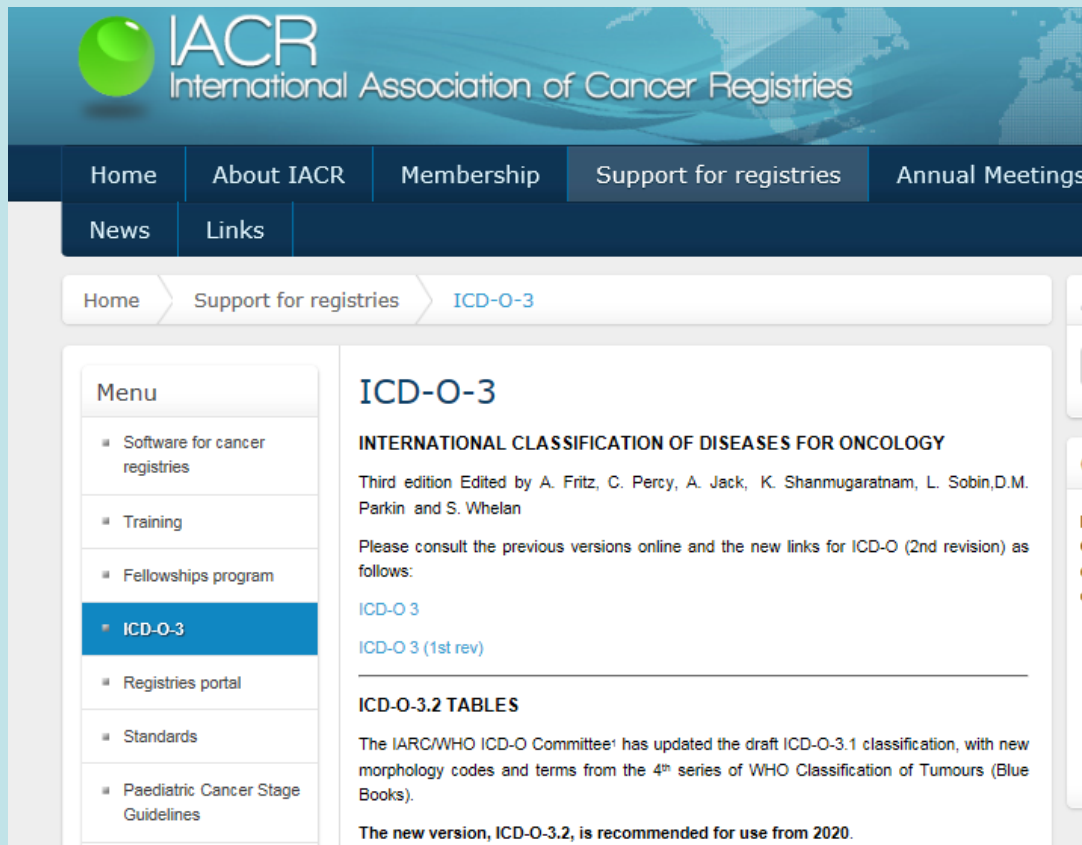

- Where did it start (topography)?

Prostate: C61.9

- Complete codes: C61.9 8140/32

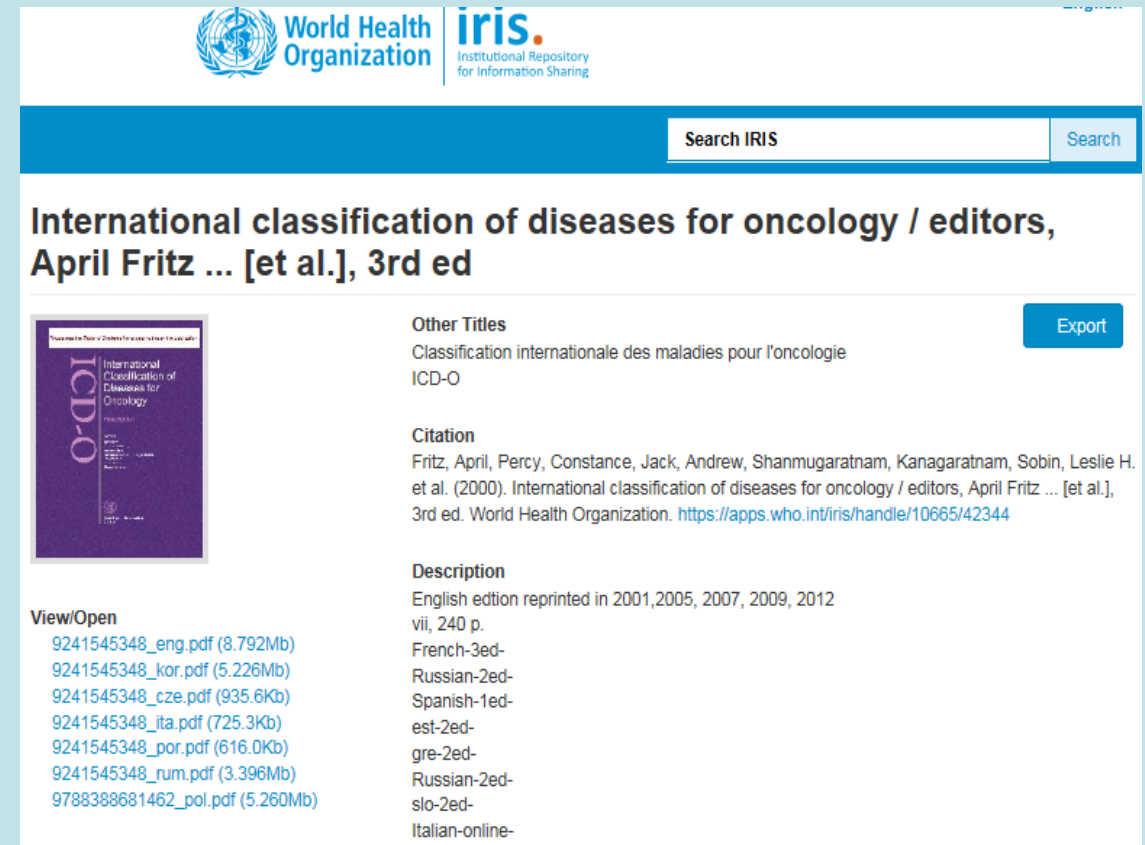

ICD-O-3 online: <http://www.iacr.com.fr>

<http://www.iacr.com.fr>

The screenshot shows the IACR website with a navigation menu and a sidebar. The main content area displays the ICD-O-3 page, including the title 'INTERNATIONAL CLASSIFICATION OF DISEASES FOR ONCOLOGY', the third edition editors (A. Fritz, C. Percy, A. Jack, K. Shanmugaratnam, L. Sobin, D.M. Parkin, and S. Whelan), and a list of links for previous versions and tables. A sidebar menu on the left lists various resources like 'Software for cancer registries', 'Training', and 'Fellowships program', with 'ICD-O-3' highlighted.

<https://apps.who.int/>

The screenshot shows the WHO IRIS application interface. It features the WHO logo and 'iris' branding. A search bar is visible at the top. The main content area displays the title 'International classification of diseases for oncology / editors, April Fritz ... [et al.], 3rd ed' and a list of 'Other Titles' in various languages. A 'Citation' section provides the full reference for the 3rd edition. A 'Description' section notes that the English edition was reprinted in 2001, 2005, 2007, 2009, and 2012. A 'View/Open' section lists several PDF files for download in different languages and formats.
